

19. The computer readable medium of claim 18, further comprising:  
upon undocking the device from the computer system,  
instructions to end the unified system;  
in response to the undocking, instructions to execute a first 5  
undocking rule associated with changes in the display of  
a fourth application window after undocking the device;  
instructions to determine if the fourth application window  
was displayed, before the undocking, on the device;  
in response to determining that the fourth application win- 10  
dow was displayed on the device, instructions to display  
the fourth application window, after the undocking, on  
the device;  
in response to the undocking, instructions to execute a  
second undocking rule associated with changes in the 15  
display of the third application window after undocking  
the device;  
instructions to determine if the third application window  
was displayed, before the docking, on the computer  
system; and 20  
in response to determining that the third application win-  
dow was displayed on the computer system before the  
docking, instructions to again display the third applica-  
tion window on the computer system.

20. The computer readable medium of claim 16, wherein 25  
the device includes a first display and a second display.
